Enhui-Li

Portfolio

EDUCATION

City University of Hong Kong

BSc in Computer Science

Sep 2024 – June 2028 (Expected)

CGPA: 3.59; SGPA: 3.71

- **Awards:** CityUHK Tiger Talent Award (2024-25)
- **Honors:** Full Tuition Scholarship; Dean's List (2024-2025)
- **Leadership:** CityU Tiger Ambassador, Excellence Committee Member
- **IELTS (Academic):** Overall Band 8.0 (Listening: 8.5, Reading: 8.5, Writing: 7.0, Speaking: 8.0)

Harbin No.9 High School

International Department

Sep 2021 – June 2024

Harbin, China

- **A-level Results:** 4A* in Mathematics, Further Mathematics, Physics, and Chemistry

ACADEMIC PROJECTS & PUBLICATIONS

Big Data Analysis for Competitive Tetris Player Performance

May 2025 - July 2025

City University of Hong Kong | Group Project

- Led frequent itemset and association rule analysis (Apriori algorithm) for a big data project analyzing top competitive Tetris players' performance and playstyle, processing game/match dataset with Python (Pandas) and Weka.
- Preprocessed Tetr.io and Classic Tetris Monthly (CTM) datasets (788 players, 10k+ game records), identified critical strategic patterns and player skill clustering, and contributed to the group's final research report and presentation.

Machine Learning Research & International Conference Publication

Jan 2023 – Mar 2023

Oxford University Instructor (Project-Based Course) | Co-Author

Online

- Completed an Python & Machine Learning seminar, building an object-oriented Python pipeline for car price prediction via linear regression.
- Co-developed linear regression and random forest models for global petroleum price forecasting; paper accepted at **International Conference on Software Engineering and Machine Learning (CONF-SEML 2023)**; access via DOI: 10.54254/2755-2721/8/20230170.

Health Monitoring Mobile Application

May 2026

MIT App Inventor 2 | Individual Project

- Created a mobile app for blood pressure and pulse tracking. Connected the application to external hardware sensors via Bluetooth, built interactive UI components, and used APIs for cloud data storage.
- Processed historical data and generated visual charts for recorded measurements.

Automatic Item Dispenser Testing System

Apr 2026

Python | Individual Project

- Developed a webcam-based automated counting program paired with light-beam sensors for an item dispenser. Used image processing techniques to detect and track moving objects.
- Conducted tests on items of different sizes and shapes, including round and oblong products. Evaluated counting accuracy across multiple test runs, analyzed existing issues and proposed optimization methods.

PROFESSIONAL EXPERIENCE

Shenzhou Digital Rongxin Software Co., Ltd.

Dec 2025 – Jan 2026

Software Engineer Intern

Beijing, China

- Contributed to Heilongjiang Rural Credit Union's "**Enterprise Microservices Platform Construction**"—a core system enabling inter-system data service governance and message protocol conversion.
- Executed data mapping, protocol configuration, and message interface development for critical online loan transactions (disbursement, repayment detail inquiry, and deposit account verification).
- Conducted cross-system joint debugging and log maintenance via log analysis platforms; applied academic knowledge to resolve technical issues, demonstrating strong teamwork.
- Utilized service governance platforms and microservices tools proficiently to support end-to-end online lending workflows, integrating credit and core banking systems.

- Developed, tested, and maintained the bank's **ATMP transaction system**, mastering the full workflow: message reception, parsing, logical processing, core banking communication, and response packaging.
- Gained experience in C programming, UE (mainstream C development tool), ACIDE process development tool, WinSQL database tool, log viewing tools, and Unix basic commands.
- Participated actively in cross-functional technical discussions; collaborated with teams to optimize system performance, gaining hands-on banking software development experience.

TECHNICAL SKILLS

- **Programming Languages:** Python, C, Java, Unix/Linux Shell, C++, JavaScript, Node.js, React
- **Tools & Platforms:** ATMP Core Banking System, UE, ACIDE, WinSQL, Log Analysis Tools, Service Governance Platform, Enterprise Microservices Platform; Pandas, Weka, TensorFlow; Eclipse, BlueJ, Visual Paradigm; MIT App Inventor 2, Webcam Image Processing, Bluetooth, Cloud APIs, Light-beam Sensors
- **Technical & Domain Concepts:** Microservices Architecture, Service Governance, OOP, Design Patterns, System Integration & Joint Debugging; Financial Message Processing, Protocol Conversion, End-to-End Banking Transactions, Data Mapping; Big Data Preprocessing, Regression/Random Forest Modeling, SQL, Database Normalization (3NF/BCNF); Hardware-Software Integration, Object Tracking, Automated Testing
